Education

Master of Science in Computer Software Engineering

Aug 2024 - May 2026

San Jose State University, San Jose, CA

CGPA: 3.75/4.00

Course Work: Data Mining, Distributed Systems, Artificial Intelligence, App Development

Technical Skills

Languages: JavaScript, C++, Java, TypeScript, SQL, Python, Ruby, HTML/CSS, Bash

AI/ML: LangChain, LangGraph, Transformers, RAG, Scikit-learn, TorchVision

Frameworks: React.js, Next.js, FastAPI, Node.js, Express.js, Ruby on Rails, Redux, Django

Utilities: Kubernetes, Docker, REST APIs, AWS, Github Actions, JSON, AJAX

Experience

Software Engineer, Adobe | San Jose | Typescript, ReactJs

Jan 2026 – Present

- Increased onboarding completion by **12%** by architecting an intent-based personalization engine that dynamically tailored Acrobat Web experiences based on user-selected goals
- Improved trial-to-paid conversion by **5.8%** by shipping a milestone-driven Trial Recap experience that surfaced personalized usage insights and feature recommendations

Software Engineer Intern, Fetch.ai | San Jose | LangChain, FastAPI

Sep 2025 – Dec 2025

- Built a custom Freelancer.com **MCP server** by exposing **31** tools that allowed agents to reason over jobs, bids, negotiations, and contract progression
- Automated **70%** of freelance hiring and coordination by building an autonomous **multi-agent** system that clarified requirements, discovered freelancers, drafted proposals, and tracked milestones
- Reduced redundant user input by **50%** by designing persistent agent metadata for contextual reuse

Software Engineer Intern, Adobe | San Jose | ReactJs, LangChain

May 2025 – Aug 2025

- Delivered a mobile comment viewing system used by **17.2M** Acrobat Mobile Web users by implementing focused/all-comments views, navigation, emoji reactions, and dynamic menus
- Automated ticket creation via **Jira MCP server**, reducing manual triage effort by **40%** by developing a multi-agent system performing sentiment analysis, bug detection, and closing feedback loop on resolution
- Delivered configurable dashboard to monitor agent-generated tickets and create automated daily reports

Software Engineer, BrowserStack | Mumbai | Ruby, NodeJs, Bash

Jan. 2022 – Jul. 2024

- Increased product adoption **8% YoY** by developing support for the Cucumber BDD testing framework
- Boosted video log stability from **30%** to **99%**, reducing S3 costs **7%** by engineering a video recorder app
- Resolved a **\$1.3M** enterprise deal blocker by integrating Detox framework into BrowserStack's platform

Project Experience

Lumos: Memory Assistance System (LAHacks'25) | TensorFlow, Lens Studio | [Github](#) April 2025

- Enhanced Alzheimer's patient well-being by designing an agentic system for facial recognition
- Delivered real-time Augmented Reality memory cues by integrating AI agents with Snapchat Spectacles

TA-DA: Smart Teaching Assistant (CalHacks'26) | Elastic Stack, Redis | [Github](#)

Feb 2026

- Engineered real-time semantic Q&A for live lectures by architecting an AI teaching assistant powered by Zoom transcripts, RAG, and multi-agent systems
- Automated concept extraction and lecture summarization through an Elastic Stack search pipeline

SafeHive: AI Security Sandbox | LangChain, Ollama, FastAPI | [Github](#)

Oct 2025

- Architected a multi-agent system to evaluate LLM-based security detection and intervention frameworks
- Developed security guard modules for PII detection and prompt sanitization with human-in-loop controls

Achievements

- **1st** place at HackDavis'25, **2nd** at LAHacks'25 and A10 Hackathon, **3rd** at LAHacks'26 and CalHacks'26
- Received **Black Belt** Award from CTO at BrowserStack's town hall for delivering Cucumber framework
